

HygienicMaster FEH610 Electromagnetic flowmeter

The standard flowmeter:
The clean choice for all hygienic
standard applications.

Measurement made easy

ABB common look and feel

- Easy Set-up function
- Simple and intuitive configuration
- Through-the-glass configuration with capacitive switches
- Backlit, rotatable LCD display
- Configurable display pages

Sensor Application Memory

- Secure storage of calibration and application specific data
- Quick change-out of transmitter without reprogramming

Verification und Online Diagnostic

- Easy to check based on Fingerprint Technology - the reference signature of the device
- Service Interval Monitoring. Message at end of service interval
- Function and Simulation routines for all outputs

Easy-to-understand diagnostic messages

- Continuous monitoring of sensor and transmitter integrity and process conditions
- Text in help menu in response to diagnostic results for fast and efficient error handling

One single transmitter fits all design types

- Integral mount design or remote mount design
- With or without LCD display
- Universal wide-range power supply

Easily customizable output signals

- Analog current output
- Two fully configurable digital outputs

Ideally suited for hygienic applications

- Field-proven, versatile sensor design
- Modular sensor design with uniform flowmeter body for simplified spare parts
- Variable connection concept
- Wide variety of industry specific process connections
- Worldwide hygienic & food approvals 3A
- FDA approved materials
- Hermetically sealed sensor - optimal Protection against Condensation, vibration and corrosion
- Smallest outer dimensions

Simplified Spare Parts Handling

- Common transmitter electronic results in significant cost reduction
- Simplified stock keeping

HygienicMaster FEH610

Electromagnetic flowmeter

The Company

ABB is an established world force in the design and manufacture of instrumentation for industrial process control, flow measurement, gas and liquid analysis and environmental applications. As a world leader in process automation technology our worldwide presence, comprehensive service and application oriented know-how make ABB a leading supplier of flow measurement products.

Introduction

The industrial standard

HygienicMaster is designed specifically to meet the requirements of the food and beverages and the pharmaceutical industries. The modular design concept offers flexibility, cost-saving operation and reliability whilst providing a long service life and exceptionally low maintenance.

Advanced diagnostic functions

The device monitors its integrity and operability continuously. When limits are exceeded, a corresponding alarm is flagged. Critical states are recognized at an early stage allowing to take appropriate measures. As a result, productivity is increased and downtimes are avoided. The status messages are classified in accordance with the NAMUR recommendations.

In the event of an error, clear text messages appear on the display considerably simplifying and accelerating the troubleshooting procedure. This gives maximum safety for the process.

Superior and reliable sensor

HygienicMaster provides a great deal of flexibility to the users. The variable process connections simplify installation, reduce inventory requirements and lower replacement costs. The electrodes are embedded into the liner, ensuring a smooth surface without gaps or crevices. The reinforced PFA liner improves vacuum stability and prevents potential liner deformation. The sensor is fully CIP/SIP cleanable. A large selection of electrode materials, electrode shapes and process connections makes HygienicMaster ideally suited for any process.

HygienicMaster is manufactured from FDA approved materials and certified in accordance with 3A.

Intuitive, convenient navigation

The user-friendly interface allows quick and simple data entry for all process parameters.

“Easy Set-up” guides the operator step by step through the menu to set parameters as fast as possible. During configuration, the limit of each parameter is indicated on the display and invalid configurations rejected.

HygienicMaster is manufactured from FDA approved materials and certified in accordance with 3A.

Universal transmitter - powerful and flexible

All product versions utilize a common electronic to lower inventory costs and spare parts.

This same cartridge can be deployed in integral and remote installations and features current, status and pulsed outputs. The backlit, graphical display can be easily rotated through 270° allowing field teams to customize the display that best fits their needs.

TTG (Through-the-glass) operation allows local operator interface to input short, quick data for all user specific parameters.

The universal ABB Human Machine Interface (HMI) simplifies operation, maintenance and training; thereby reducing cost of ownership and providing one common user experience.

Overview – models

Fig. 1: Designs

① Flowmeter sensor ② Remote transmitter

Flowmeter sensor	
Model	HygienicMaster FEH611, FEH612
Housing	Integral mount design, remote mount design
Measuring accuracy for liquids	0.5 % of measured value
Permissible measuring medium temperature T_{medium}	-25 ... 130 °C (-13 ... 266 °F)
Minimum conductivity	> 20 µS/cm (20 µS/cm for demineralized water)
Nominal pressure	PN 10 ... 40, ASME CL 150, 300, JIS 10K
Nominal diameter	DN 3 ... 100 (1/10 " ... 4 ")
Process connection	Wafer type design: DN 3 ... 100 (1/10 ... 4") Flange in acc. with DIN, ASME or JIS: DN 3 ... 100 (1/10 ... 4"), PN 10 ... 40 Threaded pipe connection in acc. with DIN 11851 ¹⁾ : DN 3 ... 100 (1/10 ... 4"), PN 10 ... 40 Weld stubs ¹⁾ : DN 3 ... 100 (1/10 ... 4"), PN 10 ... 40 Tri-Clamp in acc. with DIN 32676 ¹⁾ : DN 3 ... 100 (1/10 ... 4"), PN 10 ... 40 Tri-Clamp in acc. with ASME BPE ¹⁾ : DN 3 ... 100 (1/10 ... 4"), PN 10 ... 16 External thread in acc. with ISO 228 / DIN 2999: DN 3 ... 25 (1/10 ... 1"), PN 16
Process connection material	Stainless steel
Liner material	PFA (vakuum tight)
Electrode material	CrNi steel 1.4571 (AISI 316Ti), 1.4539 [904L], Hastelloy B, Hastelloy C, platinum-iridium, tantalum, titanium
IP rating	Integral mount design: IP 65 / IP 67 Remote mount design: IP 65 / IP 67 / IP 68 (sensor only)

Approvals	
Pressure Equipment Directive 2014/68/EU	Conformity assessment in accordance with category III, fluid group 1
CRN (Canadian Reg.Number)	On request
Hygienic design approvals	3A, FDA-approved materials
Further approvals	At www.abb.com/flow or on request.

1) 3A approved

HygienicMaster FEH610

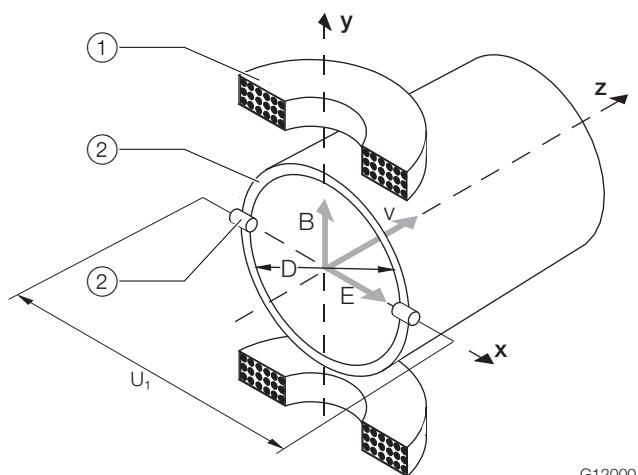

Electromagnetic flowmeter

Transmitter	
Model	FET612
Housing	Integral mount design (see Fig. 1), remote mount design.
IP rating	IP 65 / IP 67
Cable length	Maximum 50 m (164 ft), remote mount design only
Power supply	100 ... 240 V AC (-15 / +10 %), 24 ... 48 V DC (-10% / +10 %)
Outputs	Current output: 4 ... 20 mA, active Digital output 1: passive, configurable as pulse, frequency or switch output Digital output 2: passive, configurable as pulse or switch output
Local display	Configurable graphical display (option)

Approvals	
– Further approvals	At www.abb.com/flow or on request.

Measuring principle

Measurements performed by the electromagnetic flowmeter are based on Faraday's law of induction. A voltage is generated in a conductor when it moves through a magnetic field.

This principle is applied to a conductive fluid in the measuring tube through which a magnetic field is generated perpendicular to the flow direction (see Fig. 2).

The voltage induced in the fluid is measured by two electrodes located diametrically opposite each other. This signal voltage is proportional to the magnetic induction, the electrode spacing and the average flow velocity.

Considering that the magnetic induction and the electrode spacing are constant values, a proportionality exists between the signal voltage U_E and the average flow velocity.

From the equation for calculating the volume flowrate, it follows that the signal voltage is linearly proportional to the volume flowrate.

The induced voltage is converted by the transmitter to standardized, analog and digital signals.

Fig. 2: Electromagnetic flowmeter schematic

Flowmeter sensor

Measuring accuracy

Reference conditions

According to EN 29104

Measuring medium temperature	20°C (68°F) $\pm 2\text{ K}$
Ambient temperature	20°C (68°F) $\pm 2\text{ K}$
Power supply	Nominal voltage acc. to name plate $U = \pm 1\%$, Frequency $f = \pm 1\%$
Installation condition	— Upstream $>10 \times \text{DN}$, straight section — Downstream $>5 \times \text{DN}$, straight section
Warm-up phase	30 min

Measuring error and repeatability

Measuring error

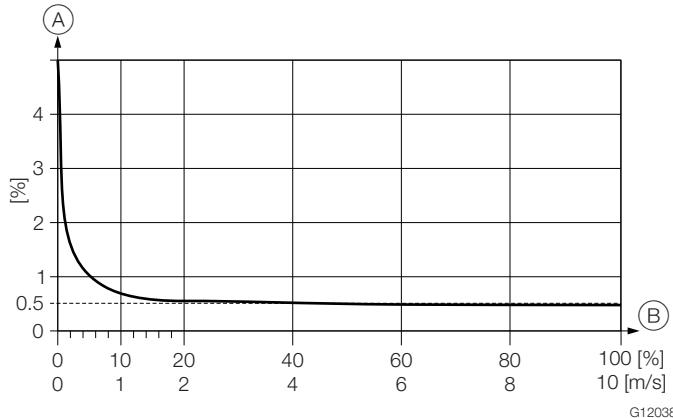

Fig. 3: Measuring error

(A) Accuracy \pm of measured value in %

(B) Flow velocity v in m/s, $Q / Q_{\max\text{DN}}$ in %

Impulse output

$\pm 0.5\%$ of measured value, $\pm 0.02\% Q_{\max\text{DN}}^1)$

1) $Q_{\max\text{DN}}$: See table in chapter "Measuring range table" on page 7.

Current output

Same as pulse output plus $\pm 0.1\%$ of measured value $\pm 0.01\text{ mA}$

Repeatability, response time

Repeatability	$\leq 0.11\%$ of measured value, $t_{\text{meas}} = 100\text{ s}$, $v = 0.5 \dots 10\text{ m/s}$
Response time ¹⁾	As step function 0 ... 99 % $5\tau \geq 200\text{ ms}$ at 25 Hz excitation frequency $5\tau \geq 400\text{ ms}$ at 12.5 Hz excitation frequency $5\tau \geq 500\text{ ms}$ at 6.25 Hz excitation frequency

1) Of current output with damping of 0.02 seconds.

HygienicMaster FEH610

Electromagnetic flowmeter

Permitted pipe vibration

In accordance with EN 60068-2-6.

Applicable to sensors in remote mount design and sensors in integral mount design.

- Maximum deflection: 0.15 mm (0.006 inch) in the 10 ... 58 Hz range
- Maximum acceleration: 2 g, in the 58 ... 150 Hz range

IP rating

- IP 65 / IP 67 in accordance with EN 60529
- IP 68 in accordance with EN 60529 (for remote mount design only)

Signal cables

For remote mount design only.

The maximum signal cable length between flowmeter sensor and transmitter is 50 m (164 ft).

A 5 m (16.4 ft) cable is included in the scope of delivery.

If more than 5 m (16.4 ft) is required, the cable can be ordered separately (Part no. D173D031U01).

Temperature data

The temperature range offered by the device is dependent on a number of different factors.

These factors include the measuring medium temperature T_{medium} , the ambient temperature $T_{\text{amb.}}$, the operating pressure P_{medium} , the liner material and the approvals for the explosion protection.

Storage temperature range

-30 ... 70 °C (-22 ... 158 °F)

Maximum permissible cleaning temperature

CIP medium	Liner material	Cleaning temperature
Steam	PTFE, PFA	150 °C (302 °F)
Cleaning fluid	PTFE, PFA	140 °C (284 °F)

- The specified cleaning temperature applies for a maximum ambient temperature of 25 °C (77 °F). If the ambient temperature is > 25 °C (> 77 °F), the difference to the actual ambient temperature must be subtracted from the maximum cleaning temperature.
- The specified cleaning temperature may be applied for a maximum of 60 minutes.

Maximum permissible temperature shock

- Maximum temperature shock temperature difference in °C: Any
- Temperature gradient °C/min: Any

Ambient temperature as a function of measuring medium temperature

Process connection	Ambient temperature range ($T_{\text{amb.}}$)		Measuring medium temperature range (T_{medium})	
	Minimum	Maximum	Minimum	Maximum ¹⁾
Flange	-20 °C (-4 °F)	60 °C (140 °F)	-25 °C (-13 °F)	95 °C (203 °F)
	-20 °C (-4 °F)	45 °C (113 °F)	-25 °C (-13 °F)	130 °C (266 °F)
Variable process connections	-20 °C (-4 °F)	60 °C (140 °F)	-25 °C (-13 °F)	95 °C (203 °F)
	-20 °C (-4 °F)	45 °C (113 °F)	-25 °C (-13 °F)	130 °C (266 °F)
Flange	-20 °C (-4 °F)	60 °C (140 °F)	-25 °C (-13 °F)	95 °C (203 °F)
	-20 °C (-4 °F)	45 °C (113 °F)	-25 °C (-13 °F)	130 °C (266 °F)
Variable process connections	-20 °C (-4 °F)	60 °C (140 °F)	-25 °C (-13 °F)	95 °C (203 °F)
	-20 °C (-4 °F)	45 °C (113 °F)	-25 °C (-13 °F)	130 °C (266 °F)

1) For CIP/SIP cleaning, higher temperatures are permitted for limited time periods; refer to chapter "Maximum permissible cleaning temperature" on page 6.

Measuring range table

The flow range end value can be set between $0.02 \times Q_{\text{max}} \text{DN}$ and $2 \times Q_{\text{max}} \text{DN}$.

Nominal diameter DN	inch	Minimum flow range end value $0.02 \times Q_{\text{max}} \text{DN} (\approx 0.2 \text{ m/s})$	$Q_{\text{max}} \text{DN}$ $0 \dots \approx 10 \text{ m/s}$	Maximum flow range end value $2 \times Q_{\text{max}} \text{DN} (\approx 20 \text{ m/s})$
3	1/10	0.08 l/min (0.02 US gal/min)	4 l/min (1.06 US gal/min)	8 l/min (2.11 US gal/min)
4	5/32	0.16 l/min (0.04 US gal/min)	8 l/min (2.11 US gal/min)	16 l/min (4.23 US gal/min)
6	1/4	0.4 l/min (0.11 US gal/min)	20 l/min (5.28 US gal/min)	40 l/min (10.57 US gal/min)
8	5/16	0.6 l/min (0.16 US gal/min)	30 l/min (7.93 US gal/min)	60 l/min (15.85 US gal/min)
10	3/8	0.9 l/min (0.24 US gal/min)	45 l/min (11.9 US gal/min)	90 l/min (23.78 US gal/min)
15	1/2	2 l/min (0.53 US gal/min)	100 l/min (26.4 US gal/min)	200 l/min (52.8 US gal/min)
20	3/4	3 l/min (0.79 US gal/min)	150 l/min (39.6 US gal/min)	300 l/min (79.3 US gal/min)
25	1	4 l/min (1.06 US gal/min)	200 l/min (52.8 US gal/min)	400 l/min (106 US gal/min)
32	1 1/4	8 l/min (2.11 US gal/min)	400 l/min (106 US gal/min)	800 l/min (211 US gal/min)
40	1 1/2	12 l/min (3.17 US gal/min)	600 l/min (159 US gal/min)	1200 l/min (317 US gal/min)
50	2	1.2 m ³ /h (5.28 US gal/min)	60 m ³ /h (264 US gal/min)	120 m ³ /h (528 US gal/min)
65	2 1/2	2.4 m ³ /h (10.57 US gal/min)	120 m ³ /h (528 US gal/min)	240 m ³ /h (1057 US gal/min)
80	3	3.6 m ³ /h (15.9 US gal/min)	180 m ³ /h (793 US gal/min)	360 m ³ /h (1585 US gal/min)
100	4	4.8 m ³ /h (21.1 US gal/min)	240 m ³ /h (1057 US gal/min)	480 m ³ /h (2113 US gal/min)

HygienicMaster FEH610

Electromagnetic flowmeter

Process connections

For an overview of the available process connection variants, see the chapter entitled "Overview – models" on page 3.

Installation length

The flange devices comply with the installation lengths specified in ISO 13359, or according to DVGW (process sheet W420, design WP, ISO 4064 short).

For further details, refer to chapter "Dimensions" on page 16.

Materials

Wetted parts

Part	Standard	Option
Liner material	PFA	—

Measurement and grounding electrode

	CrNi steel 1.4539 (AISI 904L)	CrNi steel 1.4571 (AISI 316Ti), Hastelloy C-4 (2.4610), Hastelloy B-3 (2.4600), Titanium, tantalum, Platinum-iridium
--	----------------------------------	---

Gaskets (for Weld stubs, threaded connection, Tri-Clamp, external threads)

	EPDM (Ethylene-Propylene) with FDA approval, silicone with FDA approval (CIP-resistant, no oils or grease)	Silicone with FDA approval (option, oil or grease resistant) PTFE with FDA approval (DN 3 ... 8)
--	--	--

Process connection

Welded spuds, Tri-Clamp, etc.	CrNi steel 1.4404 (AISI 316L)	—
OD tubing	CrNi steel 1.4435 (AISI 316L)	—

Non-wetted parts (process connection)

Part	Standard	Option
Process connection	CrNi steel 1.4571 (AISI 316Ti)	—

Sensor housing	
Part	Material
Housing	Deep-drawn housing CrNi steel 1.4301 (AISI 304), 1.4308
Meter tube	Stainless steel
Terminal box	Plastic, gray white, RAL 9002
Cable gland ¹⁾	Polyamide

1) Cable gland with M 20 x 1.5 or NPT thread, to be selected via the order number.

Material loads for process connections

The limits for the permissible measuring medium temperature (T_{medium}) and permissible pressure (P_{medium}) are calculated on the basis of the lining and flange material used in the device (refer to the name plate on the device).

Minimum permissible operating pressure

The following tables show the minimum permissible operating pressure (P_{medium}) depending on measuring medium temperature (T_{medium}) and the liner material.

Liner material	Nominal diameter	P_{medium} [mbar abs]	T_{medium} ¹⁾
PFA	DN 3 ... 100 (1/10 ... 4")	0	< 130 °C (266 °F)

1) For CIP/SIP cleaning, higher temperatures are permitted for limited time periods; refer to the chapter "Maximum permissible cleaning temperature" on page 6.

Liner approvals on request; please contact ABB.

Overview - Material load

Process connection	DN	P _{medium} max.	T _{medium}
Wafer type	DN 3 ... 50 (1/10 ... 2")	40 bar (580 psi)	-25 ... 130 °C (-13 ... 266 °F)
	DN 65 ... 100 (2 1/2 ... 4")	16 bar (232 psi)	
Welded spuds DIN 2463, ISO 1127, DIN 11850	DN 3 ... 40 (1/10 ... 1 1/2")	40 bar (580 psi)	-25 ... 130 °C (-13 ... 266 °F)
	DN 50, DN 80 (2", 3")	16 bar (232 psi)

Installation conditions

General information

The following points must be observed during installation:

- The flow direction must correspond to the marking, if present.
- The maximum torque for all flange screws must be complied with.
- Secure the flange bolts and nuts against pipe vibration.
- The devices must be installed without mechanical tension (torsion, bending).
- Install flange devices / wafer-type devices with plane parallel counterflanges and use appropriate gaskets only.
- Only gaskets made from a material that is compatible with the measuring medium and measuring medium temperature may be used.
- Gaskets must not extend into the flow area, since possible turbulence could influence the accuracy of the device.
- The piping may not exert any inadmissible forces or torques on the device.
- Make sure temperature limits are not exceeded operating the device.
- Vacuum shocks in the piping should be avoided to prevent damage to the liners (PTFE). Vacuum shocks can destroy the device.
- Do not remove the sealing plugs in the cable glands until you are ready to install the electrical cable.
- Make sure the gaskets for the housing cover are seated correctly. Carefully gasket the cover. Tighten the cover fittings.
- The transmitter with a remote mount design must be installed at a largely vibration-free location.
- Do not expose the transmitter and sensor to direct sunlight. Provide appropriate sun protection as necessary.
- When installing the transmitter in a control cabinet, make sure adequate cooling is provided.
- In case of a remote mounted transmitter make sure that the sensor and the transmitter have been assigned correctly. Compatible devices have the same end numbers on the name plate, e.g. flowmeter sensor X001 belongs to transmitter Y001 or flowmeter sensor X002 belongs to transmitter Y002.

Gaskets

The following points must be observed when installing gaskets:

- For achieve the best results, ensure the gaskets fit concentrically with the meter tube
- To ensure that the flow profile is not distorted, the gaskets must not protrude into the piping.
- The use of graphite with the flange or process connection gaskets is prohibited, because an electrically conductive coating may form on the inside of the meter tube.

Devices with a PFA liner

- In principle, devices with a PFA liner do not require additional gaskets.

Devices with a wafer-type design

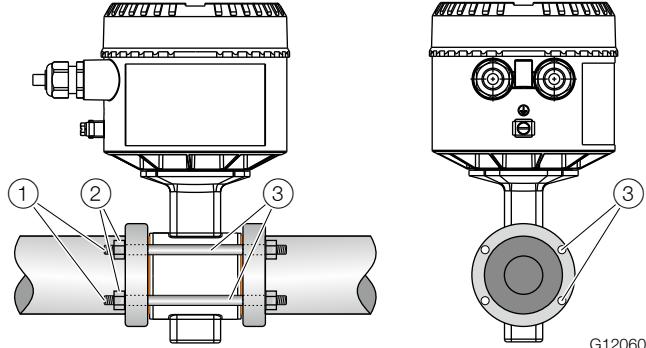

Fig. 7: Installation set for wafer-type installation (example)
① Threaded rod ② Nut with washer ③ Centering sleeves

For devices with a wafer-type design, ABB offers an installation set as an accessory that comprises threaded rods, nuts, washers and centering sleeves for installation.

Flow direction

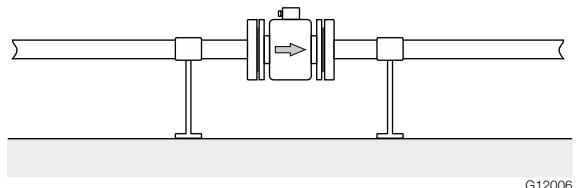

Fig. 8: Flow direction

The device measures the flowrate in both directions. Forward flow is the factory setting, as shown in Fig. 8.

Elektrode axis

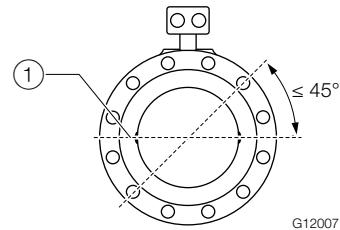

Fig. 9: Orientation of the electrode axis
① Elektrode axis

The electrode axis should be horizontal if at all possible or no more than 45° from horizontal.

HygienicMaster FEH610

Electromagnetic flowmeter

Mounting position

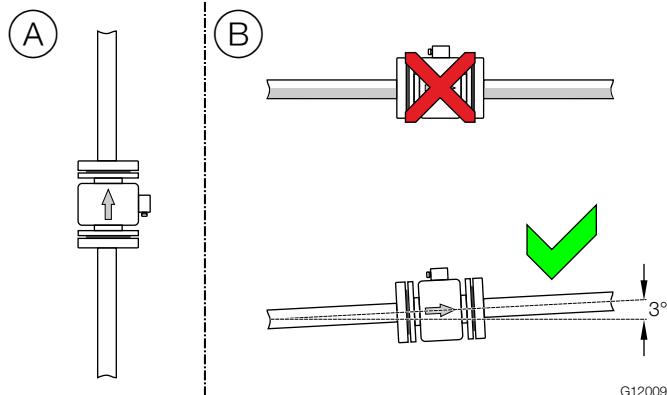

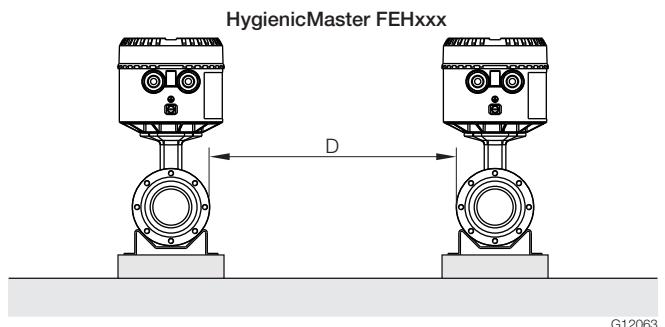

Fig. 10: Mounting position

- (A) Vertical installation for measuring abrasive fluids, preferably with flow in upward direction.
- (B) In case of horizontal installation, the Meter tube must always be completely full.
Provide for a slight incline of the connection for degassing.

NOTE

Prefer vertical installation in hygienic applications!
With horizontal installation assure the sensor is self-drainable.

Minimum distance

Distance D: $\geq 1.0 \text{ m} (\geq 3.3 \text{ ft})$

Fig. 11: Minimum distance

- In order to prevent the devices from interfering with each other, a minimum distance as shown in Fig. 11 must be maintained between the devices.
- The flowmeter sensor may not be operated in the vicinity of powerful electromagnetic fields, e.g., motors, pumps, transformers, etc. A minimum spacing of approx. 1 m (3.28 ft) should be maintained.
- For installation on or to steel parts (e.g. steel brackets), a minimum spacing of approx. 100 mm (3.94 inch) should be maintained (based on IEC801-2 and IECTC77B).

Inlet and outlet sections

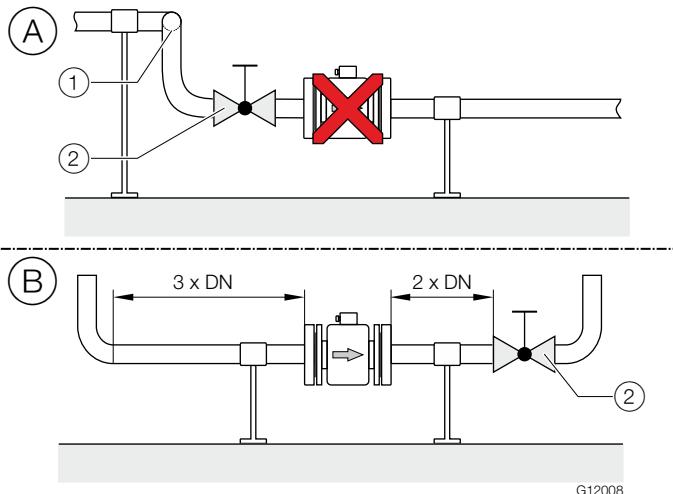

Fig. 12: In- and outlet section, turn-off component

① Double elbow ② Turn-off component

The metering principle is independent of the flow profile as long as standing eddies do not extend into the metering section, such as may occur after double elbows, in the event of tangential inflow, or where half-open gate valves are located upstream of the flowmeter sensor.

In such cases, measures must be put in place to normalize the flow profile.

- (A) Do not install fittings, manifolds, valves, etc., directly in front of the flowmeter sensor.
- (B) Inlet and outlet section: Length of straight inlet and outlet section of the flowmeter sensor.
Experience has shown that, in most installations, inlet sections $3 \times DN$ long and outlet sections $2 \times DN$ long are sufficient (DN = nominal diameter of the flowmeter sensor).
For test stands, the reference conditions of $10 \times DN$ inlet section and $5 \times DN$ outlet section must be provided, in accordance with EN 29104 / ISO 9104.
Valves or other turn-off components should be installed in the outlet section.
Butterfly valves must be installed so that the valve plate does not extend into the flowmeter sensor.

Free inlet or outlet

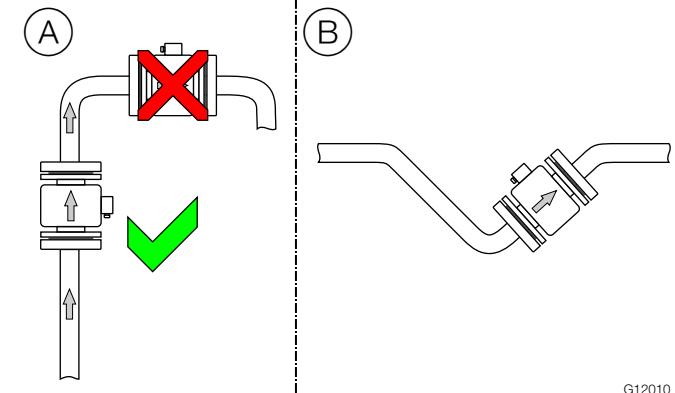

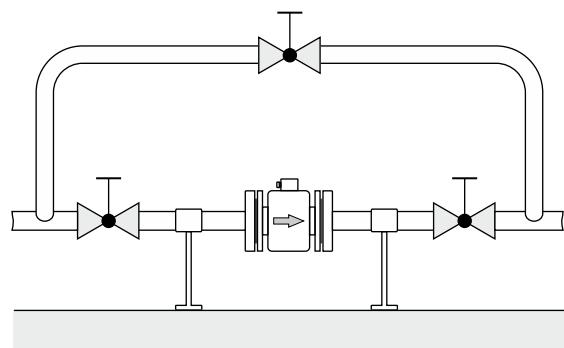

Fig. 13: Free inlet or outlet

G12010

- (A) Do not install the flowmeter at the highest point or in the draining off side of the pipeline, flowmeter runs empty, air bubbles can form.
- (B) Provide for a siphon fluid intake for free inlets or outlets so that the pipeline is always full.

Strongly contaminated measuring media

G12011

Fig. 14: Bypass connection

For strongly contaminated measuring media, a bypass connection according to the figure is recommended so that operation of the system can continue to run without interruption during the mechanical cleaning.

HygienicMaster FEH610

Electromagnetic flowmeter

Installation in the vicinity of pumps

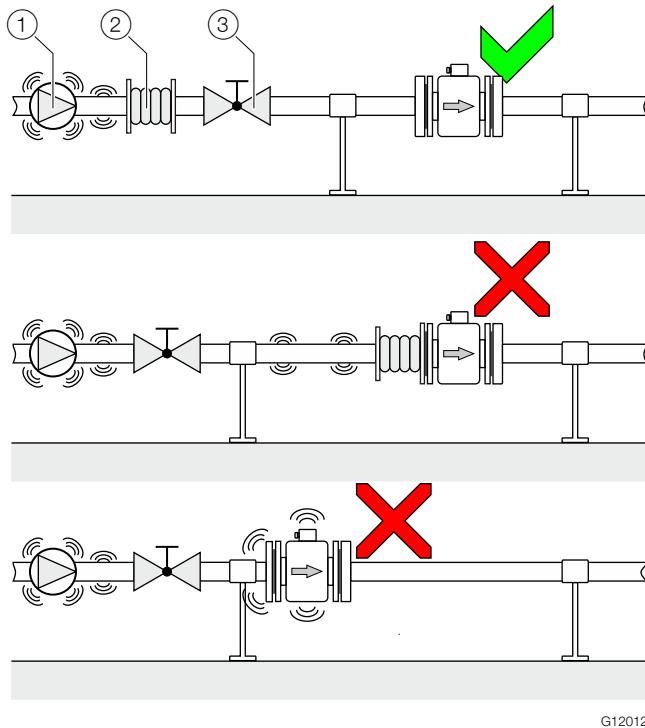

Fig. 15: Vibration damping

① Pump ② Damping device ③ Shut-off device

Strong vibrations in the pipeline must be damped using flexible damping devices.

The damping devices must be installed beyond the supported flowmeter section and outside of the section between the shut-off devices.

Do not connect flexible damping devices directly to the flowmeter sensor.

Installation in pipelines with larger nominal diameters

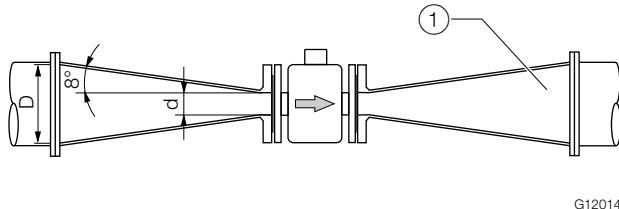

Fig. 16: using reduction pieces

① Transition piece

Determine the resulting pressure loss when using transition pieces:

1. Calculate the diameter ratio d/D .
2. Determine the flow velocity based on the flow range nomograph (Fig. 17).
3. Read the pressure drop on the Y-axis in Fig. 17.

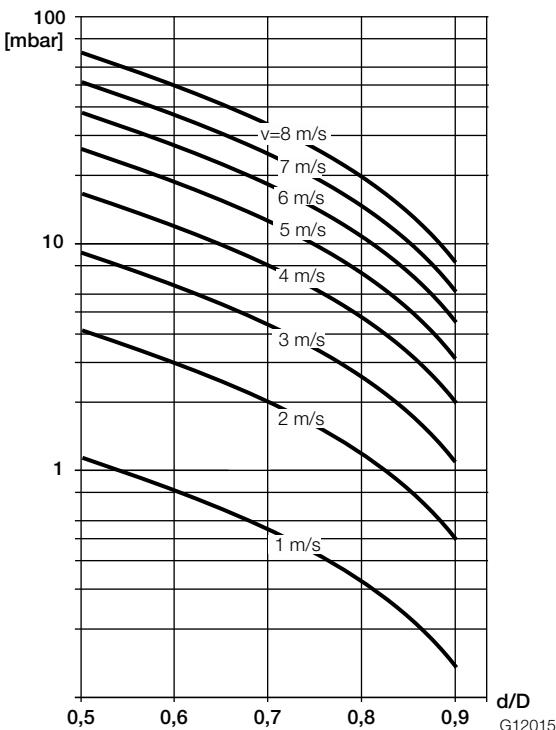

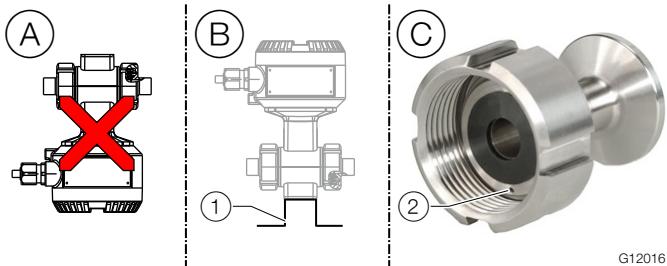

Fig. 17: Nomograph for pressure drop calculations for flange transition piece with $\alpha/2 = 8^\circ$

Installation in 3A-compliant installations

G12016

Fig. 18: 3A-compliant installation

- ① Mounting bracket ② Leakage hole

Please observe the following points:

- (A) Do not install the device horizontally with the terminal box or transmitter housing pointing downward.
 - (B) The "mounting bracket" option is not 3A-compliant.
 - (C) Please ensure that the leakage hole of the process connection is located at the deepest point of the installed device.
- Prefer vertical installation. With horizontal installation make sure the sensor is self-drainable
 - Make sure the sensor terminal compartment cover and/or the transmitter housing cover is tightened properly to ensure there is no gap between the base of the housing and the cover.

Only devices with following process connections are 3A-compliant:

- Welded stubs
- Tri-Clamp

HygienicMaster FEH610

Electromagnetic flowmeter

Transmitter

Features

- 4 ... 20 mA current output.
- Current output in the event of an alarm can be configured to 21 ... 22.6 mA (NAMUR NE43).
- Measuring range: Can be configured between 0.02 ... 2 x $Q_{\max DN}$.
- Operating mode for flow measurement can be configured.
- Programmable digital output. Can be configured as frequency output, pulse output or binary output.
- Damping: 0 ... 100 s configurable (1 τ).
- Low flow cut-off: 0 ... 20 % for current and pulse output.
- Empty pipe detection¹⁾.
- Simulation of current and binary output (manual process execution).

1) Requirements for Empty Pipe detector function:

The conductivity of the fluid must be $\geq 20 \mu S/cm$
Signal cable length must be $\leq 50 m$ (164 ft)

Nominal diameter must be $\geq DN 10$

LCD indicator (option)

- High-contrast LCD indicator.
- Display of the current flow rate as well as the total flow rate.
- Application-specific visualizations which the user can select. Two operator pages can be configured to display multiple values in parallel.
- Plain text fault diagnostics
- Menu-guided parameterization with four buttons.
- "Easy Set-up" function for fast commissioning.
- Parameterization of the device through the front glass with the housing closed.

IP rating

- IP 65 / IP 67 in accordance with EN 60529

Vibration

In accordance with EN 60068-2

- Maximum deflection: 0.15 mm (0.006 inch) in the 10 ... 58 Hz range
- Maximum acceleration: 2 g¹⁾, in the 58 ... 150 Hz range

1) Peak load

Temperature Data

Ambient temperature range

-30 ... 60 °C (-22 ... 140 °F)

Storage temperature range

-30 ... 70 °C (-22 ... 158 °F)

NOTE

When operating below -20 °C (-4 °F), the LCD display can no longer be read and the electronics should be operated with as few vibrations as possible.

Full functionality is assured at temperatures above -20 °C (-4 °F).

Housing design

Integral mount design

Housing	Plastic, RAL 9002 (light gray)
Cable gland	Polyamide

Remote mount design

Housing	Cast aluminum, painted
Paint	Paint coat $\geq 80 \mu m$ thick, RAL 9002 (light gray)
Cable gland	Polyamide
Weight	1.8 kg (3.97 lb)

Dimensions

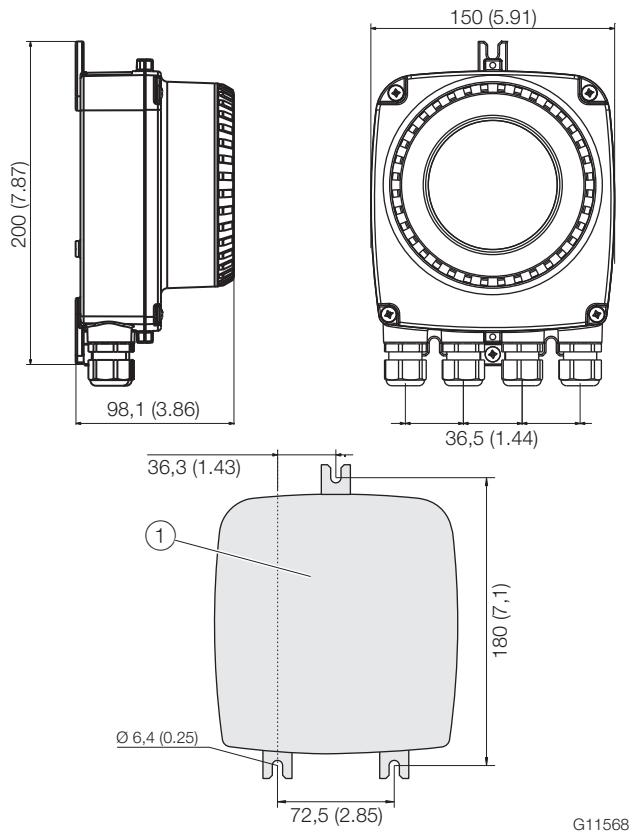

Fig. 26: Mounting dimensions (remote mount design)

(1) Hole pattern for mounting holes

HygienicMaster FEH610

Electromagnetic flowmeter

Electrical connections

Connection diagram

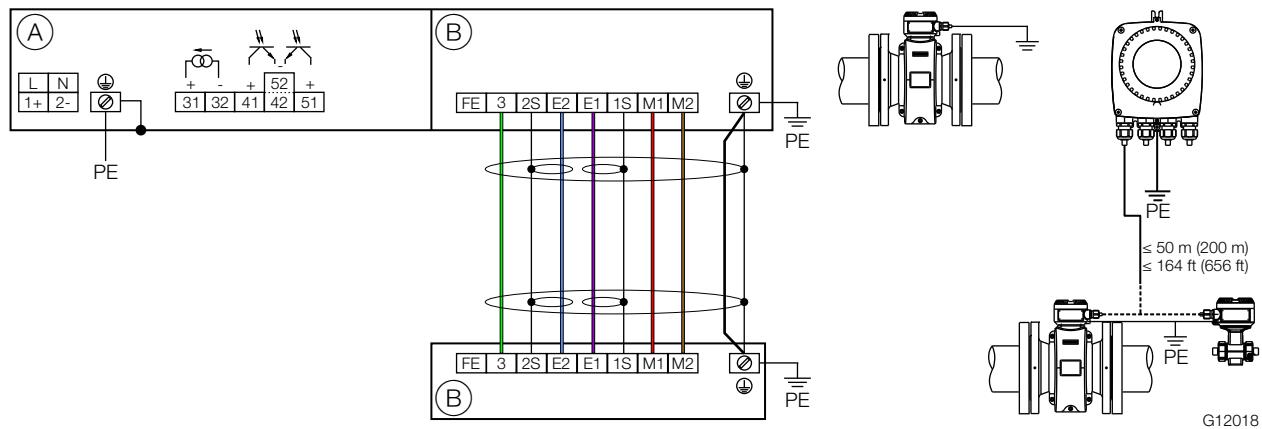

Fig. 27: Electrical connections

(A) Connections for power supply and outputs (B) Connections for signal cable (remote mount design only)

NOTE

For detailed information about grounding the transmitter and the flowmeter sensor, please refer to chapter "Grounding" in the Commissioning instruction or the operating instruction.

Connections for the power supply

AC power supply

Terminal	Function / comments
L	Phase
N	Neutral conductor
PE / \ominus	Protective earth (PE)

DC voltage supply

Terminal	Function / comments
1+	+
2-	-
PE / \ominus	Protective earth (PE)

Connections for outputs

Terminal	Function / comments
31 / 32	Active current output The current output is "active" mode. The source to drive the 20 mA loop is in-built in the transmitter.
41 / 42	Passive digital output DO1 The output can be configured as a pulse output, frequency output or switch output on site.
51 / 52	Passive digital output DO2 The output can be configured as a pulse output, frequency output or switch output on site.
\equiv	Functional earth

Connections for the signal cable

Only for remote mount design.

Terminal	Function / comments	Color
FE	Not connected	—
3	Measurement potential	green
2S	Shield for E2	—
E2	Signal line	blue
E1	Signal line	violet
1S	Shield for E1	—
M1	Magnet coil	brown
M2	Magnet coil	red
\equiv	Shield	—
—	Not connected	orange / yellow

Electrical data for inputs and outputs

Power supply L / N, 1+ / 2-

AC power supply

Terminals	L / N
Operating voltage	100 ... 240 V AC (-15 % / +10 %), 47 ... 64 Hz
Power consumption	< 20 VA
Inrush current	8.8 A

DC voltage supply

Terminals	1+ / 2-
Operating voltage	24 ... 48V DC (-10 % / +10 %)
Ripple	< 5 %
Power consumption	< 10 W
Inrush current	5.6 A

Current output 31 / 32

Can be configured for outputting mass flow, volume flow.

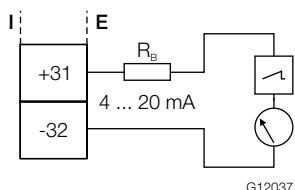

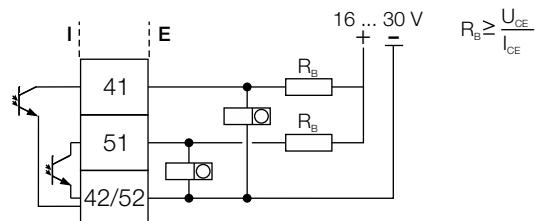

Fig. 28: Connection example active current output 31 / 32
(I = internal, E = external, R_B = load)

Current output	Active
Terminals	31 / 32
Output signal	4 ... 20 mA
Load R _B	0 Ω ≤ R _B ≤ 650 Ω

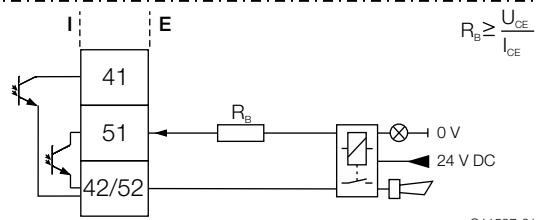

Digital output 41 / 42, 51 / 52

Can be configured as pulse, frequency or binary output.

(A)

(B)

G11597-01

Fig. 29: Connection example (I = internal, E = external, R_B = load)

(A) Passive digital output 41 / 42, 51 / 52 as pulse or frequency output

(B) Passive digital output 51 / 52 as binary output

i NOTE

- Terminals 42 / 52 have the same ground potential. Digital outputs 41 / 42 and 51 / 52 are not electrically isolated from each other.
- If you are using a mechanical counter, we recommend setting a pulse width of ≥ 30 ms and a maximum frequency of $f_{max} \leq 3$ kHz.

Pulse / frequency output (passive)

Terminals	41 / 42, 51 / 52
U _{max}	30 V DC
I _{max}	25 mA
f _{max}	10.5 kHz
Pulse width	0.1 ... 2000 ms

Binary output (passive)

Terminals	41 / 42, 51 / 52
U _{max}	30 V DC
I _{max}	25 mA
Switching function	Can be configured using software as: System alarm, empty pipe alarm, max. / min. alarm, flow direction signaling, others

Electromagnetic flowmeter

Welding adapter

The welding adapter is a tool for flowmeter sensors that feature weld stubs as the process connection type. It enables these weld stubs to be welded into the pipeline in a coplanar manner.

The welding adapter is made from stainless steel AISI 304 (1.4301)

Nominal size	Order code
DN 3 ... DN 10 (1/10 ... 3/8 in.)	D413C470U01
DN 15 (1/2 in.)	D413C471U01
